

## System Engineer

Do you want to live a new professional adventure and take part in a rewarding experience? Join the INTM group.

The INTM Group is looking for talented individuals who will grow through challenging assignments for our key accounts.

### Job description :

As part of our development, we are looking for our future System Engineer to ensure the Build and Run at our Key Accounts through the following actions:

- Administer Linux, Unix AIX/Solaris and/or Windows systems;
- Ensure the evolution of systems;
- Manage system changes;
- Participate in level 2 and level 3 support;
- Maintain operational conditions in the Linux, Unix AIX/Solaris and/or Windows environments;
- Carry out technical procedures and update the operating/administration documentation repository;
- Advise and propose solutions for the optimization of system infrastructures;
- Contribute to the implementation of DevOps approaches in the integration and production cycles.

### Profile description :

You have a first job experience that allowed you to understand the Linux, Unix AIX / Solaris or Windows environments and have been able to intervene in the resolution of N3 incidents. You have already worked in a production environment.

You have a good knowledge of Linux, Unix AIX/Solaris or Windows systems. You have also developed skills on DevOps tools such as Ansible, Docker, Jenkins, Kubernetes, etc.

You have good knowledge of scripting: Shell, Python, PowerShell.

These certifications would be a plus:

- ITIL certifications;
- Microsoft certifications;
- Redhat certifications.

Beyond your technical expertise, we are looking for dynamic personalities with excellent interpersonal skills, a good sense of communication and service.

*This position is open to people with disabilities.*
